Considerations

Who goes where and when?
Who needs to be in your facility?
Where are they allowed to go?
When can they have access?
What are you protecting?

IdentiSys Inc. is a full-service identification and security solutions provider committed to serving end users with exceptional customer service, an expansive product line, on-site service and unparalleled experience.

Contact us to learn more about access control or for information about how our integrated products can benefit your organization.

Access Control

An IdentiSys access control system continuously monitors your facilities, secures your valuable investments and reports directly to you.

Whether you need to implement a new access control system or expand an existing one, IdentiSys can help.

Organizations of any size benefit from card-based access control systems that automatically manage access at entrances with the wave or swipe of a card. You can also safeguard critical information stored in your networks and databases.

A properly managed access control system can help your organization:

- Visually monitor access
- Know who is where
- Restrict access to sensitive areas
- Monitor your assets
- Increase productivity & reliability
- Prevent unwanted intrusion
- Reduce losses

Whether you require a traditional or Internet Protocol (IP) based solution, IdentiSys sales consultants can help you determine the right access control and security management system for your organization.

Photo Identification

A photo ID card is the vehicle that drives an IdentiSys integrated electronic security system. With an established presence in the identification and card personalization industry, we understand the changing ID market and will help you deliver a successful card program.

How you use the identification card and the level of security needed in your organization determine the configuration and features for a photo ID system, related secure supplies and accessories.

We can connect your photo identification systems with access control software and technologies so you know who goes where and when in your facility.

Video Surveillance

Day or night, the use of cameras and video surveillance systems are a proven deterrent. You can start with a small system and grow as your requirements (and budget) expand. IdentiSys offers top quality video surveillance that can operate in stand-alone mode or be fully integrated into your access control system.

Coupled with a Digital Video Recording (DVR) system, you can view and control your cameras from anywhere.

Identify with IdentiSys

IdentiSys Inc. is the largest identification supplier to end users in North America, representing 50+ key suppliers in the identification and security marketplace to over 6,500 customers.
